# THE OPERATOR-

For years, the proprietary Vitality Express® dispensing system has answered operators' needs for efficiently and reliably serving beverages. Quite simply, the Express is the most dependable and easy to use dispensing system in the marketplace. Foodservice operators around the world have come to rely on the Express program with its state-of-the-art dispensers and highest quality beverages.

## Any time is the right time for the Express

The space-saving four drink Express system delivers a wide range of flavor options and its Switch-a-Brix® feature allows for the quick change-out of flavors for different day parts.

- With the flip of a switch, you can easily go from serving delicious juices in the morning to serving teas, flavored waters, and iced coffees in the afternoon. The Switch-a-Brix feature makes the change-out of flavors quick and easy, which reduces labor costs and downtime.
- The Express dispenser will work around the clock to serve cold refreshing beverages. Choose from traditional favorites like orange juice, apple juice, cranberry cocktail, and lemonade to specialty flavors like citrus peach, strawberry kiwi flavored water, and mocha iced coffee.
- The Express Pak® is now more convenient than ever, with beverages available in both frozen and shelf-stable form. The frozen Express Pak cartridges thaw quickly, and the shelf stable cartridges can be stored at room temperature which saves electricity and valuable freezer space.

## Innovative recyclable packaging

The Express Pak dispenser cartridge has patented features not found in any other beverage system, and the entire Express Pak, including the pump, is recyclable.

- Compared to single serve bottles, the Express Pak concentrated beverages are far more environmentally friendly. For example, the finished ounces in one Express Pak cartridge (with a 4:1 water to concentrate mix ratio) is equal to 42 single serve bottles (12 oz). By serving Express dispensed beverages, you can help ease the burden that single serve bottles place on our landfills.

# PREFERRED DISPENSER

- The patented Express Pak nozzle perfectly blends concentrate and water for consistent quality with every serving.
- The Express Pak is self-venting with no vent tabs to remove, and it slides easily into the dispenser storage chamber for quick loading.

The translucent Express Pak makes it easy to see when concentrate levels are low.

## Safe and reliable

The Express Dispenser is the safest, most sanitary dispensing system in the industry.

- No tubes or hoses that can trap and hold bacteria.
- Its completely closed system protects beverages from exposure to air and to internal parts, eliminating the possibility of contamination.
- All Express dispensers can be key-locked. A special dispense switch turns off the pumping mechanism and graphics panel light.

## Efficient and convenient

- The Express dispenser can deliver up to five 5 oz portions under 45 degrees F per minute.
- The Express Pak evacuates completely with no waste, and since there are no hoses or pumps, there's no need to flush the system, another common source for product loss, contamination, and spoilage.
- Three unique touch-button models are available:
  - *Press and hold*
  - *Portion control, 1 serving size*
  - *Portion control, 3 serving sizes*
- The Express dispenser includes a larger drip tray that doesn't need emptying as often – another labor saving feature.
- There's also a multi-height drip tray that makes for the easy filling of pitchers and carafes, an ideal feature for high volume establishments and catering services.

*Express 4*

# THE VITALITY EXPRESS® BEVERAGE SYSTEM

SPECIFICATIONS	4-DRINK BEVERAGE SYSTEM
Dispenser dimensions	Height 29.3" (74.4 cm), Width 15.0" (38.1 cm), Depth 24.3" (61.7 cm)
Type	Refrigerated concentrate and water mixed on demand.
Pump	Four electronically controlled pump motors.
Product Flow Rate	Approximately 1.6 oz/second (47.3 ml). Varies with product.
Concentrate capacity	Four 3 liter Express Paks
Product capability	Four selections offered, plus Switch-a-Brix® that allows up to four alternate selections.
Electrical system	Solid state control electronics with self-diagnostic system. Available in two voltage configurations: A. 110-120 VAC, 60 Hz, 8 FLA (15-16A at compressor start) B. 220-240 VAC, 50 Hz, 5 FLA
Security system	Key lock located on side of door. Night switch located behind graphics panel turns off water solenoid, pump motors, and graphics panel.
Refrigeration system	Dual capillary tube refrigeration system with individual controls for water chilling and concentrate cooling. Temperature is monitored by precision thermistors for accurate control.
Capacity	Five 5 oz. (148 ml) servings per minute under 45°F (7.2°C) at ambient air and incoming water temperature of 75°F (23°9°C).
Water connection	Inlet hose fitted with 3/8" male flare.
Water supply pressure	Requires 30-100 PSI.
Approvals	UL, C-UL, UL Sanitation, TUV, GS
Shipping weight	160 lb. (72.8 kg)
Clearance	2" (5.08 cm) at rear, sides and top for ventilation.
